How to avoid age-old endodontic mishaps via single file preparation & warm obturation

Trainer: Peter Rafferty

(Specialist Endodontist at Wessex Specialist Centre, Fareham)

Saturday 21st September 2013
09.30 till 17.00

Oasis [REDACTED]

Course Aims: - To increase attendees' confidence in their ability to perform predictable, stress free, efficient root-canal treatments in plastic blocks and extracted teeth.

After the course attendees should be able to:

- Recognise the pre-operative and intra-operative factors that predispose cases to commonly seen endodontic errors.
- Confidently prepare curved root canals using single file, rotary NiTi system.
- Quickly and safely obturate those canals using a warm gutta-percha technique.

Course Materials:

- Attendees **must** bring a minimum of 3 extracted molar teeth and 1 extracted incisor – more if you wish. Access cavities need to be prepared and the canals identified. This **MUST** be done before they attend the presentation.
- As the Support Centre is purely a non-clinical site - attendees should also bring their own rubber gloves and/or face masks if they wish to use them

CPD: 7 Hours verifiable CDP

Courses fee – £350, exclusive rate for Oasis dentists £195 (non-refundable)

Please deduct the course fee of £195 from my Monthly Associate Payment for the Endodontic Course with Peter Rafferty:
